What this is. Nordic does not publish a service life for Nordic Lam, and F.U.S.E. does not invent one. The member is scored with the app's own figure for structural timber — 90 years in a dry wall — so the year column is the model's, not Nordic's.

The assembly. Fiber-cement lap over housewrap on OSB, 2 storeys, metal roof over it, closed roof space, nothing repainted. Six sites, 25 years.

What this is not. A warranty, a code ruling, or a substitute for the local trade. F.U.S.E. reports the order failures arrive in; it does not promise the year.

WHAT HAPPENS NEXT

Send one product line and its span data. It goes into the catalogue as a real member — width, depth, layup or gauge, stock lengths — and comes back as this sheet, with the spec figures checked against your own table and your name on the member a contractor picks.

Nothing ships with your name on it until you have read the sheet and said yes.
